An overview of the system is followed by an evaluation of its design and functionality. Next, the laboratory is used to investigate some of the fundamental questions about photosynthesis, namely, whether it is a steady-state process, which is a useful assumption in all of the previous studies. The simulation software is used to generate results that relate to the laboratory. Finally, the system is used to demonstrate various treatments that change the properties of the PBR with the purpose of optimizing them. by R Dormido 2013 This paper provides a critical review of the use of the Duro Piston Pump in the field of microalgae cultivation. The first section provides an overview of the relevant literature on this topic. The second section is devoted to an explanation of the Duro Piston Pump system and its working. The third section is dedicated to a brief description of the use of the Duro Piston Pump in the field of microalgae cultivation. The fourth section discusses the optimization of the Duro Piston Pump and its application to an outdoor tubular photobioreactor. The paper concludes by offering some final considerations on the use of the Duro Piston Pump in the field of microalgae cultivation. by R Dormido 2013 Various farm implements used in the microalgae cultivation are presented and their functions are explained. The first part of the paper includes: milking machine, photobioreactor for the production of the biomass, potato peel extractor, roller cultivator, fertilizer applicator, sprayer, hand tiller, motorized tiller, seed planter, and an aeroponic tray. The following sections describe the function of each implement by: its use in the cultivation, the problems that arise in the use of each implement, and the way the use of the implement affects the microalgae cultivation. by P Kahlert 2012 Foils that enhance the driving torque for the Duro Piston Pump were investigated. The Duro Piston Pump was the basis for the proposed experiments. The experiments evaluated the effect of, i.e., thickness, diameter, and type of foil, on the driving torque. by R Dormido 2011 The Duro Piston Pump has been used to cultivate Chlorella vulgaris (Trebbiti) Schenk. & Smith. (Hemiptera, Chlorellidae) (CCAP culture number: 26020) in an outdoor tubular photobioreactor. The Duro Piston Pump 2d92ce491b
