Race 3 is a Hindi-language epic film produced by Dinesh Vijan and directed by Kabir Khan, based on Arshad Warsi's book of the same name. The film stars Salman Khan, Anil Kapoor and Jacqueline Fernandez.. RACE 3 FULL HD MOVIE. Download HD or 4K Wallpapers, Photos and Free Wallpapers. Race 3 is the final installment in the blockbuster series Salman Khan starrer franchise.Q:

Returning multiple models on a single LINQ query I have a user interface in which the user can add and remove notes from a list of a custom object type (lets call it 'Note' for this example). When the user adds a note, it is stored in the database. Then when the user wants to view the notes, I have a method that returns a list of the notes. I have a LINQ query that looks something like this: `var notes = (from p in db.Notes join b in db.Things on p.NoteId equals b.NoteId where b.Type == 1 select p).ToList();` This

query does not work. Because I am using ToList(), the notes are only returned once, even though there are multiple records in the database with the same NoteId. What's the best way to write this query so that it returns all records that have the same NoteId? A: You can use a join on the Id: var notes = (from p in db.Notes join b in db.Things on p.NoteId equals b.NoteId into t from t1 in t.DefaultIfEmpty() where b.Type == 1 select p).ToList(); This will return all Notes with Id = x that have an associated

Thing where Type == 1.
