ExSB is a portable software tool that allows users to export Windows settings and data. The main window of this application is very simple and it only includes the selection field where you can select the settings that you would like to export. Before exporting, you can preview all the settings of the Windows system. There are quite a few settings that you can export, and they include: Action Center, Start Menu, App permissions, Background apps, Quick action icons, Taskbar pinned icons, Power options, Wallpapers and colors. Moreover, you can also export date/time information, disabled events, tasks or services, quick access items and firewall rules. When you are done, you can either send the exported settings directly to a selected folder or to a specified archive file. The export process can be completed quite fast since the user does not need to select a specific location, and everything is ready to go.
