For the last three years, I have used .NET 2.0 to build a proprietary data integration application. I was happy with this approach, but I decided to investigate the opportunity of migrating to .NET 3.5 and the Entity Framework. After a few months of work, I am very happy with the results. The only downsides of using this framework are the lack of a good LINQ provider and the inconsistency between metadata and model. Conclusion: My previous experience with .NET 3.5 and Entity Framework is that it is a powerful tool that is worth your time and effort to explore.
