On December 10, 1994, Pavel created the first version of MCVE. After making a series of improvements, the final version was published in May 1996. In September 1997, Pavel posted the first version of his HyperCard package, the first version of the Internet archive, the first version of Midas, and several other utility applications. Pavel continues to maintain and add to these software packages today.

---

Today, Pavel is focused on producing the best software he can and is working on his next project. MCVE is a software package for creating graphical hypertext documents, which are known as virtual reality hypertext documents. It is a package that can be used to create any kind of virtual reality hypertext document with hyperlinks between pages. MCVE enables a user to design and create hypertext documents with full support of mouse and keyboard. MCVE has an editor for pages, and an editor for linking pages. MCVE also supports embedded video and image files, supporting up to 15 images per document, and supports streaming audio. MCVE supports optional special characters, such as double underlines and . The authoring language is HyperCard, so the user can use the standard HyperCard hyperlinks and commands. "MCVE is basically the best of HyperCard 3.0, but it has a lot of extra features." - Grant Yule Aldus Page Plus is a software package that lets you design and create documents with full support of the mouse and keyboard, supporting up to 15 images per document. Its editing tools support large documents, with unlimited text, multi-page backgrounds, graphics, borders, and other special characters. You can also create and save drawings, images, text, and other objects, and include them in your documents. 1d6a3396d6
